## BONAFIDE CERTIFICATE

Certified that this project report on **"CRIME RECORD MANAGEMENT SYSTEM"** is the bonafide work of **SATHIYA SELVAM S (8115U24E049)** who carried out the project work during the academic year 2025 - 2026 under my supervision.

**SIGNATURE**
**Dr. R. SASIKUMAR M.E., Ph.D.,.,**
**HEAD OF THE DEPARTMENT**
ASSISTANT PROFESSOR
Computer Science and Engineering
K.Ramakrishnan College of Engineering
(Autonomous)
Samayapuram – 621 112.

**SIGNATURE**
**Mr. K. SWAMINATHAN M.E., MBA., (Ph.D.).,**
**SUPERVISOR**
ASSISTANT PROFESSOR
Computer Science and Engineering
K.Ramakrishnan College of Engineering
(Autonomous)
Samayapuram – 621 112.

Submitted for the viva-voce examination held on …….

INTERNAL EXAMINER EXTERNAL EXAMINER

# DECLARATION

I declare that the project report on **"CRIME RECORD MANAGEMENT SYSTEM"** is the result of original work done by me and best of my knowledge, similar work has not been submitted to **"ANNA UNIVERSITY CHENNAI"** for the requirement of Degree of **BACHELOR OF ENGINEERING**. This project report is submitted on the partial fulfilment of the requirement of the completion of the course **EGB1221 – DATABASE MANAGEMENT SYSTEMS.**

**Signature**

_____

SATHIYA SELVAM S

Place: Samayapuram

Date:

# ACKNOWLEDGEMENT

It is with great pride that I express our gratitude and in-debt to our institution "**K.Ramakrishnan College of Engineering (Autonomous)**", for providing us with the opportunity to do this project.

I glad to credit honourable chairman **Dr. K. RAMAKRISHNAN**, **B.E.,** for having provided for the facilities during the course of our study in college.

I would like to express our sincere thanks to our beloved Executive Director **Dr. S. KUPPUSAMY, MBA, Ph.D.,** for forwarding to our project and offering adequate duration in completing our project.

I would like to thank **Dr. D. SRINIVASAN, B.E, M.E., Ph.D.,**Principal, who gave opportunity to frame the project the full satisfaction.

I whole heartily thanks to **Dr. R. SASIKUMAR, M.E., Ph.D.,** Head of the department, **COMPUTER SCIENCE AND ENGINEERING** for providing her encourage pursuing this project.

I express our deep expression and sincere gratitude to our project supervisor **Mr. K. SWAMINATHAN, M.E., MBA., (Ph, D).,** Department of **COMPUTER SCIENCE AND ENGINEERING,** for his incalculable suggestions, creativity, assistance and patience which motivated us to carry out this project.

I render our sincere thanks to Course Coordinator and other staff members for providing valuable information during the course.

I wish to express our special thanks to the officials and Lab Technicians of our departments who rendered their help during the period of the work progress.

# COLLEGE VISION AND MISSION

**VISION**

- To achieve a prominent position among the top technical institutions

## MISSION

- To bestow standard technical education par excellence through state-of-the-art infrastructure, competent faculty and high ethical standards.
- To nurture research and entrepreneurial skills among students in cutting edge technologies.
- To provide education for developing high-quality professionals to transform thesociety.

# DEPARTMENT VISION AND MISSION

**VISION**

To emerge as a renowned department for high quality teaching, learning and research in the domain of Electrical and Electronics Engineering, producing professional engineers, to meet the challenges of society

## MISSION

**M1.** To establish the infrastructure resources for imparting quality technical education in Electrical and Electronics Engineering.
**M2.** To achieve excellence in teaching, learning, research and development.
**M3.** To impart the latest skills and developments through practical approach along With moral and ethical values.

## PROGRAM EDUCATIONAL OBJECTIVES

Our graduates shall

**PEO1**: Analyse, design and create innovative products for addressing social needs.

**PEO2**: Equip themselves for employability, higher studies and research.

**PEO3**: Nurture the leadership qualities and entrepreneurial skills for their successful career.

## PROGRAM SPECIFIC OUTCOMES (PSOs)

**PSO1:** Apply the basic and advanced knowledge in developing software, hardware and firmware solutions addressing real life problems.

**PSO2:** Design, develop, test and implement product-based solutions for their career enhancement.

## PROGRAM OUTCOMES (POs)

Engineering students will be able to:

**PO1: Engineering Knowledge:** Apply knowledge of mathematics, natural science, computing, engineering fundamentals and an engineering specialization to develop to the solution of complex engineering problems.

**PO2: Problem Analysis:** Identify, formulate, review research literature and analyze complex engineering problems reaching substantiated conclusions with consideration for sustainable development.

**PO3: Design/Development of Solutions:** Design creative solutions for complex engineering problems and design/develop systems/components/processes to meet identified needs with consideration for the public health and safety, whole-life cost, net zero carbon, culture, society and environment as required.

**PO4: Conduct Investigations of Complex Problems:** Conduct investigations of complex engineering problems using research-based knowledge including design of experiments, modelling, analysis & interpretation of data to provide valid conclusions.

**PO5: Engineering Tool Usage:** Create, select and apply appropriate techniques, resources and modern engineering & IT tools, including prediction and modelling recognizing their limitations to solve complex engineering problems.

**PO6: The Engineer and The World:** Analyze and evaluate societal and environmental aspects while solving complex engineering problems for its impact on sustainability with reference to economy, health, safety, legal framework, culture and environment.

**PO7: Ethics:** Apply ethical principles and commit to professional ethics, human values, diversity and inclusion; adhere to national & international laws.

**PO8: Individual and Collaborative Team work:** Function effectively as an individual, and as a member or leader in diverse/multi-disciplinary teams.

**PO9: Communication:** Communicate effectively and inclusively within the engineering community and society at large, such as being able to comprehend and write effective reports and design documentation, make effective presentations considering cultural, language, and learning differences

**PO10: Project Management and Finance:** Apply knowledge and understanding of engineering management principles and economic decision-making and apply these to one's own work, as a member and leader in a team, and to manage projects and in multidisciplinary environments.

**PO11: Life-Long Learning:** Recognize the need for, and have the preparation and ability for i) independent and life-long learning ii) adaptability to new and emerging technologies and iii) critical thinking in the broadest context of technological change.

# ABSTRACT

The Crime Record Management System is a software application designed to efficiently store, manage, and retrieve crime-related data in a secure and organized manner. It replaces traditional manual record-keeping methods, which are time-consuming and error-prone, with a digital platform that allows easy entry, updating, deletion, and searching of records such as FIR details, criminal history, case status, and investigation reports. The system ensures data security through authorized access, reduces redundancy by maintaining a centralized database, and improves accuracy and efficiency in handling information. It also supports report generation and analysis to help identify crime patterns and trends. Overall, the system enhances the effectiveness of law enforcement agencies by saving time, reducing paperwork, and improving decision-making and public safety. In addition, the system provides real-time data access, enabling quick responses during emergencies. It improves coordination between different departments and officers. The system also minimizes the risk of data loss through proper backup mechanisms. It can be easily scaled to handle large volumes of data. Furthermore, it promotes transparency and accountability in crime management processes.

## ABSTRACT WITH POs AND PSOs MAPPING

# CHAPTER 1

# INTRODUCTION

## 1.1 Objective

The main objective of the Crime Record Management System is to provide an efficient and reliable way to store and manage crime-related information. It aims to replace manual record-keeping with a computerized system to reduce errors and save time. The system helps in maintaining detailed records of criminals, cases, and investigations in a structured format. It also enables quick retrieval of information whenever required.

Another objective of the system is to enhance security and ensure that sensitive data is accessed only by authorized personnel. It aims to reduce data redundancy by using a centralized database system. The system also supports generating reports and analyzing crime patterns for better decision-making. It helps in improving coordination among different departments of law enforcement.

## 1.2 Overview

The Crime Record Management System is a digital solution developed to handle crime-related information in an efficient and organized manner. It replaces traditional manual record-keeping methods with a computerized system that simplifies data storage and retrieval. The system maintains details of crimes, criminals, victims, and case progress in a structured format. This helps law enforcement agencies manage large volumes of data with improved accuracy and speed.

The system also ensures secure access to sensitive information through authentication and authorization mechanisms. It supports quick searching, updating, and report generation, which aids in better decision-making. By providing real-time access to records, it enhances coordination among different departments.

## 1.3 Technologies Used

### MySQL

MySQL is used as the backend database to store and manage crime-related data such as criminal records, FIR details, case status, and investigation reports. It organizes data into tables with rows and columns and supports relationships using primary and foreign keys. This ensures data integrity, reduces redundancy, and enables efficient data retrieval.

### Key Features:

- Relational data storage
- Support for complex queries and JOIN operations
- Indexing for faster data access
- Data consistency using foreign key constraints

### SQL (Structured Query Language)

SQL is used to interact with the MySQL database for performing operations like inserting new crime records, updating case details, deleting outdated data, and retrieving required information. It helps in efficient data handling and plays a major role in generating reports and analyzing crime data.

### Database Design (Relational Model)

The system follows a relational database design where crime-related data is stored in multiple interconnected tables such as criminals, cases, police records, and reports. Primary keys uniquely identify each record, while foreign keys maintain relationships between tables. This design ensures consistency, minimizes duplication, and improves system performance.

# CHAPTER 2
# PROJECT METHODOLOGY

## 2.1 Problem Description

The current crime record management process in many law enforcement agencies relies heavily on manual methods such as paper-based files and registers. This approach is time-consuming, inefficient, and prone to human errors, leading to difficulties in maintaining accurate and up-to-date records. Retrieving specific information from large volumes of data becomes a challenging and slow task. There is also a high risk of data loss, damage, or misplacement due to improper handling and storage. Lack of proper organization makes it difficult to track case progress and criminal history effectively. Communication between departments is often delayed, affecting timely decision-making. Overall, the traditional system fails to meet the growing demands of modern crime management.

Another major problem is the lack of a centralized system to store and manage crime-related information. Data is often scattered across different departments, making it difficult to access and share information when needed. This results in duplication of records and inconsistency in data. It also affects coordination among officers and delays investigation processes.

Additionally, the absence of proper security mechanisms in manual systems can lead to unauthorized access and misuse of sensitive information. There is limited ability to generate reports and analyze crime patterns for preventive measures. This reduces the efficiency of law enforcement agencies in handling cases effectively. Hence, there is a need for a computerized system to overcome these issues.

## 2.2 Proposed Work

The proposed Crime Record Management System is designed to provide an efficient and centralized platform for managing crime-related data. It aims to replace manual record-keeping methods with a digital system that ensures accuracy and speed. The system will allow authorized users to store, update, and retrieve information about crimes, criminals, and investigations. It will maintain detailed records such as FIRs, case progress, and officer details. This approach improves overall data handling and reduces errors in record management.

The system will include secure login features to ensure that only authorized personnel can access sensitive information. It will support real-time data entry and quick retrieval, helping officers respond faster to cases. The proposed system will also generate reports and summaries for better analysis of crime patterns. It will enhance communication between different departments by allowing data sharing. Overall, it will increase efficiency, transparency, and reliability in crime management.

The system will be designed using a user-friendly interface to make it easy for officers to operate. It will also include proper validation methods to ensure accurate data entry. Backup and recovery features will be implemented to prevent data loss. This makes the system more reliable and secure.

In addition, the proposed system will be scalable to handle large amounts of data in the future. It will reduce paperwork and save time in maintaining records. The system will also support better decision-making through organized data. Hence, it will contribute to effective law enforcement and public safety.

## 2.3 ER Diagram

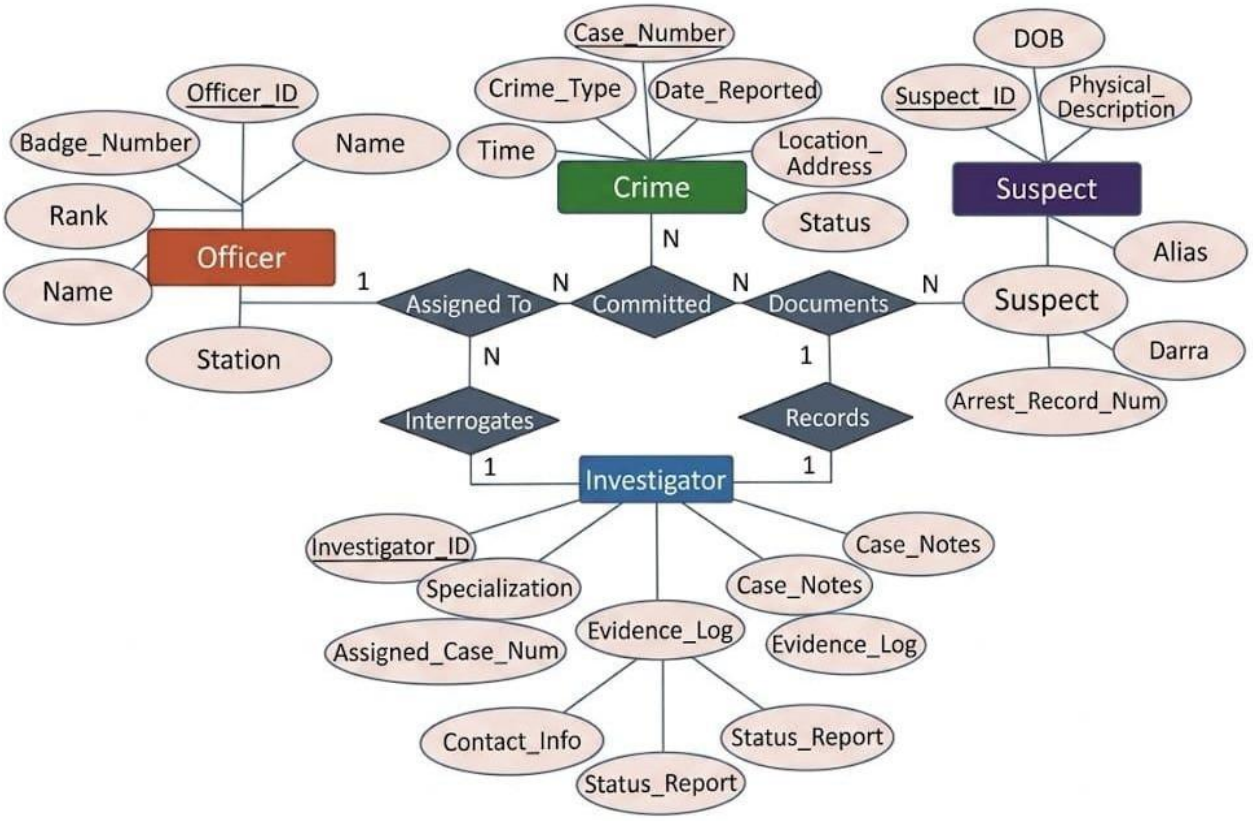

Fig. 2.1: Crime Record Management System

# CHAPTER 3
# MODULE DESCRIPTION

## 3.1 Crime Module

The Crime Module is responsible for recording and managing all details related to criminal incidents. It stores information such as crime ID, type of crime, date, location, and description of the incident. This module allows officers to register new cases (FIR), update case status, and track progress of investigations. It also links crimes with suspects, victims, and assigned officers for better coordination. The module helps in quick retrieval of case information and supports report generation. Overall, it ensures proper documentation and efficient handling of crime records.

## 3.2 Officer Module

The Officer Module manages information about police officers involved in the system. It includes details such as officer ID, name, rank, contact information, and assigned duties. This module allows administrators to assign officers to specific cases and track their responsibilities. It also helps in monitoring officer activities and performance. Secure login access is provided for officers to manage case details. The module improves coordination and accountability within the department.

## 3.3 Document Module

The Document Module is used to store and manage all important case-related documents in the system. It includes files such as FIR copies, evidence records, investigation reports, witness statements, and legal documents. This module allows users to upload, view, update, and delete documents securely. Each document is linked to specific cases, suspects, or officers for easy access and tracking. It ensures proper organization and reduces the risk of losing important records. Access to documents is restricted to authorized users to maintain confidentiality. The module also supports digital storage, reducing paperwork and improving efficiency. Overall, it helps in maintaining accurate and secure documentation for all crime records.

## 3.4 Suspect Module

The Suspect Module maintains records of individuals suspected or involved in criminal activities. It stores details like suspect ID, name, age, address, criminal history, and associated cases. This module helps officers track repeat offenders and analyze criminal patterns. It links suspects with specific crime records for easy reference. The system allows updating suspect status during investigation. This module plays a key role in identifying and managing criminal data effectively.

## 3.5 Investigator Module

The Investigator Module focuses on managing investigation-related activities and assigned personnel. It stores details of investigators, their assigned cases, and progress of investigations. This module helps in tracking investigation status, evidence collection, and case updates. Investigators can record findings, upload reports, and monitor case developments. It ensures proper coordination between investigators and officers. Overall, it improves the efficiency and accuracy of the investigation process.

 SELECT * FROM Crime;

-- 4. Display Open Cases
SELECT * FROM Crime
WHERE status = 'Open';
```

```
-- 5. Update Crime Status
UPDATE Crime
SET status = 'Closed'
WHERE crime_id = 1;

-- 6. Delete Crime Record
DELETE FROM Crime
WHERE crime_id = 3;

-- 7. Count Total Crimes
SELECT COUNT(*) AS Total_Crimes FROM Crime;

-- 8. Sort by Crime Type
SELECT * FROM Crime
ORDER BY crime_type;
```

# CHAPTER 5
# CONCLUSION & FUTURE SCOPE

## 5.1 CONCLUSION

The Crime Record Management System provides an efficient and reliable solution for managing crime-related information in a structured and secure manner. It replaces traditional manual methods with a digital platform, improving accuracy and reducing paperwork. The system enables easy storage, retrieval, and updating of records such as crimes, suspects, officers, and investigation details. It ensures data security through controlled access and minimizes redundancy using a centralized database. The system also supports quick report generation and analysis of crime patterns. It enhances coordination among departments and improves response time in handling cases. User-friendly interfaces make the system easy to operate for authorized personnel. Backup and recovery features ensure data safety and reliability. The system is scalable and can handle large volumes of data efficiently. Overall, it plays a vital role in improving law enforcement operations and ensuring public safety.

## 5.2 FUTURE SCOPE

The future scope of the Crime Record Management System includes integrating advanced technologies such as Artificial Intelligence and Machine Learning to predict crime patterns and trends. These technologies can help in identifying high-risk areas and preventing crimes before they occur. The system can also be enhanced with data analytics tools for better decision-making. Real-time data processing can further improve response times. Such improvements will make the system more intelligent and proactive.

Another important enhancement is the integration of mobile applications for easy access by officers in the field. This will allow real-time updates, case tracking, and communication from remote locations. GPS and location-based services can be added to track crime locations and patrol units. The system can also include biometric authentication for improved security. These features will increase flexibility and efficiency in operations.

The system can also be expanded to include integration with national crime databases and other government systems. This will help in sharing information across different regions and departments. Cloud-based storage can be implemented for better scalability and accessibility. Advanced security measures like encryption can be added to protect sensitive data. These upgrades will ensure better coordination and data safety.

In the future, the system can support multilingual interfaces for wider usability. It can also include automated report generation features. Overall, these improvements will enhance system performance and usability.
